Dear Mr. Braxton:

I am applying for a gypsum board waste dumping variance to the approved Mining and Reclamation Plan submitted by United States Gypsum Company. This variance would consist of back-hauling gypsum board waste to the F-1 pit in the quarry. When the F-1 pit is filled to capacity, the F-1 area will be reclaimed as prescribed in the approved Reclamation Plan submitted by our company.

The gypsum board waste consists of the following ingredients: 91% gypsum, 2% shale, anhydrite, and other natural impurities in the rock, and 7% raw materials used to manufacture the board. If a further breakdown of the raw materials is required or there are other questions, please contact David M. Hollingshead at (801) 896-4484.

Thank you.
